Umar Zubair

AI Frontend Engineer | Technical PM

umarzubaircs@gmail.com +966532417962 linkedin.com/in/umar-zubair960 Github Portfolio Riyadh,SA

Summary

Frontend engineer building production React and Next.js interfaces for AI products: streaming chat UIs, design systems and TypeScript SPAs backed by FastAPI. Currently shipping the customer-facing platform at Odoo Dashboards in Riyadh. Arabic and English, transferable Iqama.

Work & Leadership Experience

AI Product Engineer **June 2026 – Present**
Odoo Dashboards *Riyadh,KSA*

- Rebuilt the product frontend as a Next.js and TypeScript SPA with Shadcn, Tailwind and Framer Motion, moving the team off static templates onto shared design tokens and a documented component library; cut first-load JS with route-level code splitting and lazy imports, tracked on Web Vitals.
- Built the chat and query surface against a FastAPI backend, rendering streamed Claude tokens over SSE with React Query caching, optimistic updates and retry handling so long-running report jobs stay responsive.
- Replaced Supabase magic links with an n8n onboarding flow wired into FastAPI: trial signups get custom payloads, activation is verified against Polar.sh API keys, and leads land in Notion and the Odoo CRM with no manual entry.

AI Engineering Intern **June 2025 – July 2025**
Axon Build *Remote*

- Shipped an AI-powered Shopify support bot end to end, from PRD and design reviews to the React chat widget in production, cutting query resolution time by 25%.
- Built an AI News Curator on the OpenAI Agent SDK and deployed it on Docker and AWS ECS at 99% uptime; three iterations on the agent and retrieval layer lifted feed relevance 25% and dropped delivery latency 35%.

Projects & Research Experience

TradeUp - Mock Trading Platform for the Pakistan Stock Exchange | *GitHub* **NextJS | NestJS | PostgreSQL**

* Built the trading interface in Next.js and TypeScript: live portfolio and watchlist views driven by a WebSocket price feed, with charts, order forms and client-side validation.
* Wrote the NestJS API and PostgreSQL schema behind it, covering JWT auth with refresh tokens, role-based access for admin and trader accounts, and cached quote reads to keep the price endpoint fast under repeated polling.

Clutterless: AI-Powered Academic Email Management App | *Website* **Figma | Design System | UX Research**

* Ran discovery for a team of 5 (30+ user interviews, an audit of 8 email tools, a survey showing students lose about 45 min a day to inbox noise), then designed the full experience in Figma with a reusable component and token set and reworked the flows across two rounds of usability testing.

Education

Lahore University of Management Sciences
Bachelor of Computer Science

- **Relevant Coursework**: Human Computer Interaction, Software Engineering, Machine Learning, Deep Learning, Computer Vision, Data Structures, Databases, Algorithms, ML-Ops
- **Seoul National University (Exchange Semester)** Service Management, Economics

Technical Skills & Certifications

Frontend: TypeScript, React, Next.js, Tailwind, Shadcn, Framer Motion, React Query, Zustand, design tokens, RTL/Arabic layouts, Web Vitals

Backend & AI: Python, FastAPI, Node.js, NestJS, REST, GraphQL, WebSockets/SSE, LangChain, CrewAI, MCP, Claude API, RAG pipelines

Data & Infra: PostgreSQL, Supabase, MongoDB, Redis, Chroma, Docker, AWS, GitHub Actions, n8n, OAuth/OIDC

Testing & Tooling: Playwright, Jest, Testing Library, Claude Code, Figma, Notion, Jira, Miro

Courses: Google AI Professional Certificate, MCP for LLM Applications, System Design (Maven)

Languages & Additional Info: English - Fluent, Arabic - Intermediate, Urdu - Native, **Transferrable Iqama**
