Umar Zubair

Technical Product Manager | Product Engineer

umarzubaircs@gmail.com +966 53 241 7962 linkedin.com/in/umar-zubair GitHub Portfolio Riyadh, KSA

Professional Summary

Technical product builder who takes customer problems to shipped features. I own Odoo Dashboards, an Odoo analytics product live across ∼300 client branches, from discovery and roadmap to release, and lead Onto BI, a governed ontology layer that lets business users question their ERP in plain English without the LLM ever writing SQL.

Work Experience

AI Product Engineer **June 2026 – Present**
Odoo Dashboards *Riyadh, KSA*

- Onto BI (AI analyst for Odoo SMEs): Wrote the product and technical plan (7 milestones, ∼32 dev-days) for a governed semantic layer.
- Shipped the MVP (YAML metric packs, deterministic compiler, 8-node LangGraph agent, with every metric matching hand-written ground-truth SQL to the cent. Set a 6-score CI eval gate.
- Led the pivot from in-Odoo add-on to hosted Next.js product through a decision record on multi-tenancy, execution locus and governance UI.

AI Engineering Intern **June 2025 – July 2025**
Axon Build *Remote*

- Wrote the PRD for an AI Shopify support bot, ran design and engineering reviews, and shipped it to production as a React chat widget, cutting query resolution time by 25%.
- Ran three build–measure–learn cycles on an AI news curator (OpenAI Agents SDK, AWS ECS, 99% uptime), raising feed relevance 25% and cutting delivery latency 35%.

Projects

Clutterless – AI Email Triage Concept for Students | *HCI Course Project, Feb – Apr 2026* **Figma | UX Research**

- **Problem:** Surveyed 100+ LUMS students and interviewed 25+. Found that 90% considered ∼80% of their inbox irrelevant and 72% felt anxious or frustrated by the noise.
- **Solution:** Co-led a 5-person team from research to a hi-fi Figma design for AI email triage (swipe-to-filter, Daily Digest, Bulletin Board, calendar sync), each feature traced to a validated pain point.
- **Validation:** Tested the hi-fi mockups with students [result]; moved the Preferences Directory into the main flow to fix a discoverability gap testers flagged, then presented the final design to the HCI course.

TradeUp – PSX Trading Simulator | *GitHub* | *Live* **Next.js | NestJS | PostgreSQL | Gemini**

- Top contributor on a 5-developer team building a gamified Pakistan Stock Exchange simulator for beginner investors; took it from MVP to launch in 4 weeks, and it grew to 100+ active traders.
- Built live WebSocket portfolio and watchlist views, the NestJS/Prisma trading API (JWT, P&L), and "Market Oracle," 30-day AI-generated tournament markets, alongside a Gemini trading coach.

Education

Lahore University of Management Sciences (LUMS) **2022 – 2026**
BSc Computer Science *Lahore, Pakistan*

- **Relevant Coursework**: Human-Computer Interaction, Software Engineering, Machine Learning, Databases, Algorithms, MLOps
- **Seoul National University (Exchange Semester)**: Service Management, Economics

Skills & Certifications

Product:Usability testing, prototyping, LLM eval design, funnel and lifecycle metrics, PostHog

Technical: TypeScript, Next.js, React Native (Expo), Python, FastAPI, SQL/PostgreSQL, LangGraph, Claude API, MCP, RAG

Tools: Figma, Notion, Jira, Miro, n8n, Odoo 16, Claude Code, GitHub Actions, Docker

Certifications: Anthropic Academy (Building with the Claude API, MCP, Claude Code); Google AI Professional Certificate

Languages & Additional Info: English (fluent), Urdu (native), Arabic (intermediate); **Open to relocation in EU**
