Work & Leadership Experience

AI Product Management Intern

June 2025 – July 2025

Axon Build

Remote

- Took full ownership of an AI-powered Shopify support bot from PRD to production: wrote the spec, ran stakeholder reviews, and shipped a solution that cut customer query resolution time by 25%.
- Prototyped an AI News Curator using OpenAI-Agent SDK ; iterated on agent architecture through three build-measure-learn cycles until feed relevance improved 25% and content delivery latency dropped 35%.
- Used Claude Code for AI-assisted debugging and codebase navigation across the full stack; managed Docker and AWS deployment to maintain 99% uptime in a production environment.

FullStack Engineer Intern

May 2024 – June 2024

The Locate

Remote

- Shipped UI/UX improvements and full-stack features on a live B2B marketplace platform (MVP) supporting 100+ active users; worked directly with the product team to scope and prioritize each sprint.
- Improved system reliability through database query optimization and frontend performance fixes on a production codebase built with React, Node.js, and PostgreSQL.

GCCH Harvard Case Competition - Data Analyst

Jan 2025 - April 2025

- Led a 5-person team through a technical feasibility study on the Ferrari-Pirelli acquisition; synthesized complex automotive datasets into a clear investment recommendation delivered under a 4-week deadline.

Projects & Research Experience

The Sentinel - Gemini Hackathon Entry | *GitHub*

FastAPI | NextJS | Gemini ADK

- * Built an autonomous QA agent MVP (before Co-work) that ingests video or screenshot input, identifies visual regressions, and generates executable code fixes, skipping the manual bug-report cycle entirely.
- * Engineered a self-correcting feedback loop using Playwright and the GitHub API: the agent opens PRs, monitors real-time CI/CD results, and rewrites its fixes until tests pass.

Vision Transformer for Alzheimer's Disease Progression Prediction | *GitHub*

Tensorflow | Python

- * Designed and trained a ViT model on MRI sequences to predict disease stage; built the full data pipeline, handled model fine-tuning, and ran evaluation end-to-end.

Clutterless: AI-Powered Academic Email Management App | *Website*

Figma | Stitch | Product Design

- * Ran end-to-end product discovery for a team of 5: 30+ user interviews, competitive audit of 8 email tools, and a survey that surfaced the core insight ,students lose about 45 min/day to inbox noise.
- * Designed the complete product experience in Figma and Google Stitch: swipe-based triage, Daily Digest, Bulletin Board, and smart calendar sync — each feature mapped directly to a validated pain point.

Education

Lahore University of Management Sciences

Bachelor of Computer Science

- **Relevant Coursework:** Human Computer Interaction, Software Engineering, Machine learning, AI and Education, Deep Learning, Computer Vision, Data Structures, Databases, Algorithms, ML-Ops
- **Seoul National University (Exchange Semester)** Service Management, Economics

Technical Skills & Certifications

Technical Expertise: Python, JAVA, TS, C++, AWS, Docker, Claude Code, Kubernetes, Figma, MCP, Claude Code

Courses and Competencies: Google AI Professional Certificate, MCP for LLM Applications , System Design-Maven

Libraries/Frameworks: Spring Boot, ReactJS, PostgreSQL, NextJS, Langchain, CrewAI, MongoDB

PM Tools & Expertise: Notion,Miro,Slack,Jira,UX-Research,

Languages & Additional Info: English - Fluent, Arabic - Intermediate, Urdu -Native , **Transferrable Iqama**
